A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 4, 2003 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 29-55 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kubickova et al and Preininger et al.

Kubickova et al disclose the different components of cheese flavor and the relative amounts of each component (see entire document, especially the Tables).

Preininger et al disclose the different components of cheese flavor and the relative amounts of each component (see entire document, especially the Tables).

Art Unit: 1761

The claims differ as to the specific amounts claimed.

It is noted that the relative volume/area values taught by the prior art are equivalent to the claimed amounts of each component such that the amounts claimed would be inherent and/or obvious to that of the prior art.

It is also noted that Claim 29 does not include Group 6, Group 9, Group 13, and Group 14 as zero is included in the claimed ranges, and Claim 53 does not specifically claim any amounts.

It is also noted that Kubickova et al Preininger et al specifically teach phenylacetaldehyde, nonanone, butyric acid, valeric acid, dodecalactone, and methanethiol (see the Tables) as is claimed by Applicant. Applicant claims a cheese flavor where cheese flavors are known. Applicant combines known components to obtain expected results. It is also noted that addition of salt in cheese production is well-known.

Attention is invited to In re Levin, 84 USPQ 232 and the cases cited therein, which are considered in point in the fact situation of the instant case, and wherein the Court stated on page 234 as follows:

This court has taken the position that new recipes or formulas for cooking food which involve the addition or elimination of common ingredients, or for treating them in ways which differ from the former practice, do not amount to invention, merely because it is not disclosed that, in the constantly developing art of preparing food, no one else ever did the particular thing upon which the applicant asserts his right to a patent. In all such cases, there is nothing patentable unless the applicant by a proper showing further establishes a coaction or cooperative relationship between the selected ingredients which produces a new, unexpected, and useful function. In re Benjamin D. White, 17 C.C.P.A (Patents)

Art Unit: 1761

956, 39 F.2d 974, 5 USPQ 267; In re Mason et al., 33 C.C.P.A. (Patents) 1144, 156 F.2d 189, 70 USPQ 221.

All of the claim limitations have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.
